Introduction

Imagine a student writing an essay on the environment. She knows the themes she wishes to cover and the ideas and arguments to get across. She already has a stock of useful vocabulary, especially high-content nouns like environment, pollution, ozone layer. What is missing are the words that can link these high-content vocabulary items together into a coherent whole – a narrative or an argument. Pollution is a problem, but what needs to be done about it? Looking up the entry for pollution in the Oxford Collocations Dictionary and skimming down to the verbs section offers the choice of avoid/prevent, combat/control/ﬁght/tackle, cut/limit/minimise/reduce or monitor. With the back-up help of a good monolingual learner’s dictionary (such as the Oxford Advanced Learner's Dictionary) if need be, the student can choose the most appropriate verb, the one that expresses most exactly what she wants to say.

What is collocation?

Collocation is the way words combine in a language to produce natural-sounding speech and writing. For example, in English you say strong wind but heavy rain. It would not be normal to say *heavy wind or *strong rain. And whilst all four of these words would be recognized by a learner at pre-intermediate or even elementary level, it takes a greater degree of competence with the language to combine them correctly in productive use. To a native-speaker these combinations are highly predictable; to a learner they are anything but.

Combinations of words in a language can be ranged on a cline from the totally free – see a man/car/book – to the totally ﬁxed and idiomatic – not see the wood for the trees. This idiom is not only ﬁxed in form, it also has nothing whatever to do with wood or trees. Between these two extremes, there is a whole range of nouns that take the verb see in a way that is neither totally predictable nor totally opaque as to meaning. These run from the fairly 'weak' collocation see a ﬁlm (which elementary students learn as a 'chunk' without pausing to reﬂect that this is not quite the literal meaning of see) through the 'medium strength' see a doctor to the 'stronger' collocations of see danger/reason/the point. All these combinations, apart from those at the very extremes of the cline, can be called collocation. And it is combinations such as these – particularly in the 'medium-strength' area – that are vital to communicative competence in English.

Why is collocation important?

Collocation runs through the whole of the English language. No piece of natural spoken or written English is totally free of collocation. For the student, choosing the right collocation will make his speech and writing sound much more natural, more native-speaker-like, even when basic intelligibility does not seem to be at issue. A student who talks about *strong rain may make himself understood, but possibly not without provoking a smile or a correction, which may or may not matter. He will certainly be marked down for it in an exam.

But, perhaps even more importantly than this, language that is colliquationally rich is also more precise. This is because most single words in the English language – especially the more common words – embrace a whole range of meanings, some quite distinct, and some that shade into each other by degrees. The precise meaning in any context is determined by that context: by the words that surround and combine with the core word – by collocation. A student who chooses the best collocation will express himself much more clearly and be able to convey not just a general meaning, but something quite precise. Compare, for example, the following two sentences:

This is a good book and contains a lot of interesting details.
This is a fascinating book and contains a wealth of historical detail.

Both sentences are perfectly 'correct' in terms of grammar and vocabulary, but which communicates more (both about the book under discussion and the person discussing it)?
Why use a Collocations Dictionary?

A normal dictionary, whether monolingual or bilingual, splits up meaning into individual words; it has a lot of power in dissecting the meaning of a text. Its power is more limited when it comes to constructing texts. Good learner’s dictionaries give as much help as they can with usage, with grammar patterns clearly explained, register labels and example sentences showing words in context. Modern dictionaries are increasingly giving attention to collocation. But they are still hampered by trying to provide a whole range of information about any word besides its collocations. A grammar provides an analysis of the general patterns that exist in a language. But its productive power is limited by the degree to which it generalizes in order to come up with ‘grammatical rules’. A collocational dictionary doesn’t have to generalize to the same extent: it covers the entire language (or a large part of it!) on a word by word, collocation by collocation basis. It manages this by not attempting to account for every possible utterance, only for what is most typical.

By focusing on the specific rather than the general, a collocations dictionary is also able to ‘pre-digest’ a lot of the grammar involved, presenting collocates in their most typical form in context, even if this is not the usual dictionary citation form. For example at the entry for baby, you will find the collocation be teething, reflecting the fact that this verb is always used in the progressive tenses. Use the collocations dictionary systematically and you become much more aware of the extent to which English makes use of the passive, an aspect of grammar that even advanced students may be reluctant to put to full productive use.

By covering the language systematically from A-Z, a collocations dictionary allows students to build up their own collocational competence on a ‘need-to-know’ basis, starting from the words they already know – or know in part. Occasional, or even regular, collocations exercises in coursebooks cannot fulfil this role, although they do a useful job of raising the profile of collocation as an essential feature of the language, and teach some useful collocations in the process.

Which collocations are included in this dictionary?

The approach taken to this question was pragmatic, rather than theoretical. The questions asked were: is this a typical use of language? Might a student of English want to express this idea? Would they look up this entry to find out how? The aim was to give the full range of collocation – from the fairly weak (see a film, an enjoyable holiday, extremely complicated), through the medium-strength (see a doctor, direct equivalent, highly intelligent) to the strongest and most restricted (see reason, burning ambition, blindingly obvious) – for around 9,000 headwords. Totally free combinations are excluded and so, for the most part, are idioms. Exceptions to this rule are idioms that are only partly idiomatic: not see the wood for the trees may have nothing to do with wood or trees, but drive a hard bargain is very much about bargaining even if the expression as a whole can be considered an idiom.

The first question (Is this a typical use of language?) required that all the collocations be drawn from reliable data. The main source used was the 100 million word British National Corpus. From this, compilers of the dictionary were able to check how frequently any given combination occurred, in how many (and what kind of) sources, and in what particular contexts. The corpus also supplied many of the example sentences, most of which were either taken directly from the authentic texts included in the corpus, or with minor modifications to make them more accessible (but without, of course, altering any collocations). For fast-changing areas of language, such as computing – particularly rich in collocation – corpus information was supplemented by using the Internet as a resource.

The second question asked (Might a student of English want to express this idea?) led to a focus on current English: language that students not only need to understand but can be expected to reproduce. It was felt that, for productive use, students were better concentrating on one variety of English, and British English was chosen. Consideration was also given to the kind of texts that students might wish to write. Primary attention was given to what might be called ‘moderately formal language’ – the language of essay
and report writing, and formal letters – treating all subjects – business, science, history, sport, etc. (this list could go on for half a page) at the level of the educated non-specialist. In addition, the dictionary includes some of the most important collocations from some specialist areas, particularly law and medicine; collocations from popular fiction, particularly useful in treating more personal subjects such as feelings and relationships; informal collocations and those very frequent in spoken language; and a few of the most frequent collocations from British journalism. Technical, informal and journalistic uses are labelled as such.

The third question asked (Would a student look up this entry to find this expression?) led to the exclusion of noun collocates from verb and adjective entries. When framing their ideas, people generally start from a noun. You might think of rain and want to know which adjective best describes rain when a lot falls in a short time. You would be unlikely to start with the adjective heavy and wonder what you could describe with it (rain, breathing, damage, gunfire?) Similarly, you might be looking for the verb to use when you do what you need to do in response to a challenge. But you would not choose meet and then choose what to meet (a challenge, an acquaintance, your death, the expense).

‘The full range of collocation’, as well as implying collocations of different strengths, also covers all the following types of combination:

- adjective + noun: bright/harsh/intense/strong light
- quantifier + noun: a beam/ray of light
- verb + noun: cast/emit/give/provide/shed light
- noun + verb: light gleams/gloves/shines
- noun + noun: a light source
- preposition + noun: by the light of the moon
- noun + preposition: the light from the window
- adverb + verb: choose carefully
- verb + verb: be free to choose
- verb + preposition: choose between two things
- verb + adjective: make/keep/declare sth safe
- adverb + adjective: perfectly/not entirely/environmentally safe
- adjective + preposition: safe from attack

plus short phrases including the headword: the speed of light, pick and choose, safe and sound

Most of the collocations in the dictionary can be called ‘word collocations’, that is, these are the precise words that combine with each other: small fortune cannot be changed to little fortune, even though small and little would seem to be synonymous. There is another area of collocation that might be called ‘category collocation’, where a word can combine with any word from a readily definable set. This set may be quite large, but its members are predictable, because they are all words for nationalities, or measurements of time, for example. At the entry for walk, one of the groups of collocates is given as ‘three-minute, five minutes’, etc.: the ‘etc.’ is to indicate that any figure may be substituted for ‘three’ or ‘five’ in these expressions.

It also happens that certain sets of words share all or most of their collocations. This is particularly true of very strictly defined sets such as days of the week, months and points of the compass, but it also applies to slightly less rigid, but still limited sets such as currencies, weights and measures and meals. In order to show how these collocations are shared by a number of headwords, the dictionary includes 25 usage notes, each treating the collocations of a particular set. The entries for the individual members of the set include a cross-reference to the usage note. In cases where all the collocations are shared (months, for example) the cross-reference replaces all other information in the entry. In cases where some of the collocations are shared, but others apply only to an individual member of the set (for example, seasons), the individual collocations are given at the entry, and a cross-reference directs the user to the shared collocations in the usage note. A full list of the usage notes and where they may be found is given on page iv. The 9,000 headwords include most of the commonest words in the language that upper-intermediate students will
already know, plus some words that they will start to encounter as they move to a more advanced level of English. Some very common words – such as the verbs make and do – do not merit entries of their own. This is because these verbs have no real collocations of their own. They themselves are the collocations of lots of nouns, and appear in the entries for those nouns. There are also two pages of exercises in the central study section addressing this notorious area of difficulty.

How to use this dictionary

This dictionary is intended for productive use, most typically for help with writing. The collocations in each entry are divided according to part of speech; within each part of speech section they are grouped according to meaning or category. (In the example above from pollution, avoid and prevent are roughly synonymous, as are combat, control, fight and tackle, and so on). The groups are arranged in an order that tries to be as intuitive as possible: in this case from the ‘strongest’ form of action (avoid/prevent) to the ‘mildest’ (monitor). Many collocate groups have illustrative examples showing one or more of the collocations in context.

Because this is a type of dictionary that may be totally new to many students it is recommended that users familiarize themselves with how the dictionary works by working through some of the exercises in the photocopiable study section in the centre of the dictionary. The first of these aims to show the overall concept of the dictionary by looking at a single entry (idea) in some detail. The next few exercises take users systematically through the different sections of the entries for nouns, verbs and adjectives. Two pages of exercises get students thinking about the common verbs make, do, have, give and take; and the remaining exercises range across the whole dictionary, testing collocations linked to various themes, including politics, jobs and money.

Other information in this dictionary

The focus of this dictionary is very much on collocation. In order to make the collocational information as comprehensive and accessible as possible, non-collocational information has largely been excluded. Definitions of headwords are given only insofar as they are necessary to distinguish different senses of the same word, when they have different collocations and need to be treated separately. These are not full definitions, but rather ‘sense discriminators’, just detailed enough to allow the senses to be distinguished. Register information is given when any pair of words in combination take on a different register from the two words separately. Examples would be do drugs (informal) – though neither do nor drugs are informal in themselves – or hear a lecture (formal). (Exceptions to this rule are collocates labelled taboo where the label applies to the single word and to any combination it occurs in.) Collocations are also labelled if they belong to a particular field of language such as law or medical. For a full list of the usage labels used in this dictionary, see inside the front cover. In addition to these labels, more specific usage restrictions such as ‘in football’ or ‘used in journalism’ are given in brackets.

The most frequent usage label used in the dictionary is figurative. It is a feature of English that when the meaning of a word is extended and used in a non-literal sense, the collocations of the literal sense are often carried over: that is, both literal and figurative meanings of a word may share collocations. The dictionary indicates where this is so: for example, at way, the collocation lose is given, followed by the examples: She lost her way in the fog, and (figurative) The project seems to have lost its way. With strong collocations that are slightly idiomatic, a short explanation of the meaning may be given. For example, at bargain, the phrase drive a hard bargain has the gloss (= force sb to agree to the arrangement that is best for you).

The dictionary also includes ten special pages on different topics such as business, meetings and sport. These pull together collocations from the different topics and can be used as the basis for topic work in class, or for brainstorming vocabulary for an essay, for example. A full list of special topic pages and where to find them is given on page iv.
It is hoped that this dictionary will be of use not only to students of English of upper-intermediate level and above, but also to teachers (both non-native speaker and native-speaker teachers, looking for ways to present collocations to their students), translators, academics, business people, and all who wish to write fluent and idiomatic English. The Guide to the Entries (pages xii-xiii) is there as a quick reference, to give help as needed, but the whole dictionary has been designed to be accessible, and (we hope) enjoyable to use.
